

1

THE SKYSCRAPERS

LOGIC

Erasmus+

Class level

- ▶ 4th / 5th grades

Number of players

- ▶ 2

Performed by :

- ▶ Virginie Lammersfeld
- ▶ Source : <http://www4.ac-nancy-metz.fr/labomathic/spip.php?article47>

**Aims of the game**

- ▶ Complete one's grid, placing the skyscrapers.

Materials

- ▶ 1 game grid
- ▶ Stackable colored cubes (4 different colors)
 - 16 cubes of the first color
 - 12 cubes of the second color
 - 8 cubes of the third color
 - 4 cubes of the fourth color

How to play ?

- ▶ Build the skyscrapers :

To build one skyscraper, you must use cubes of the same color. The skyscrapers of the same size must have the same color.

You need : - 4 skyscrapers of 4 floors (in the first color)

- 4 skyscrapers of 3 floors
- 4 skyscrapers of 2 floors
- 4 skyscrapers of 1 floor

- ▶ Place the skyscrapers :

You must place 1 skyscraper by tile.

In a line or in a column, you must have one skyscraper of each size.

The numbers outside the grid give you some clues. They indicate the numbers of skyscrapers visible by a person located there.
