

QUAND UN DINOSAURE DEVIENT UN FOSSILE

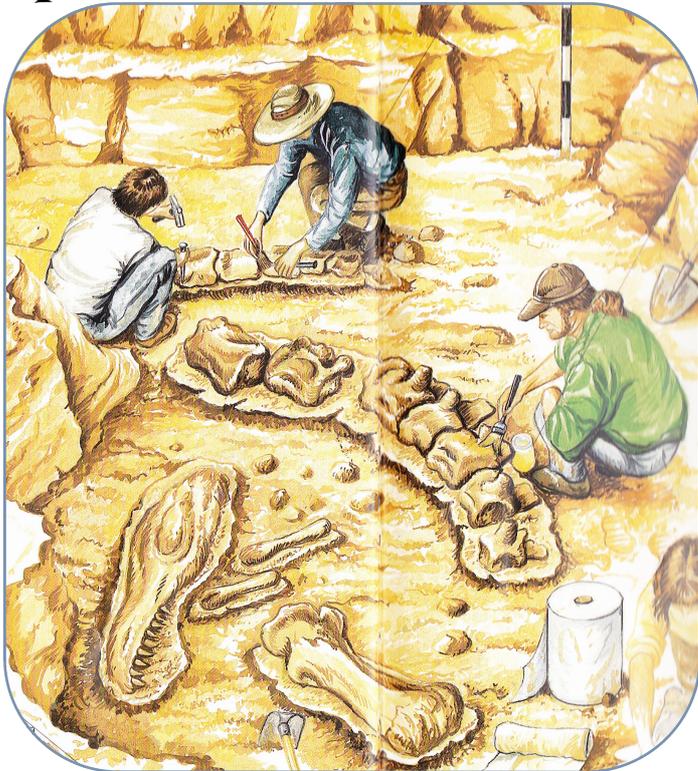

Un dinosaure meurt et tombe au fond de la rivière

Bientôt il ne reste plus que son squelette. Au bout de très longtemps, les os se transforment en pierre: le dinosaure est devenu UN FOSSILE.

A LA RECHERCHE DES DINOSAURES

C'est LE PALEONTOLOGUE qui cherche les fossiles. Il trouve:

des dents

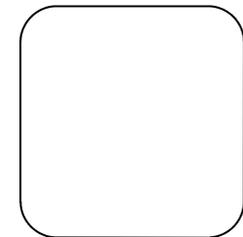

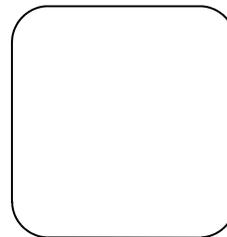

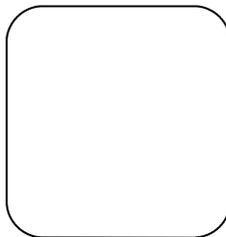

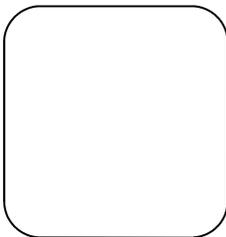

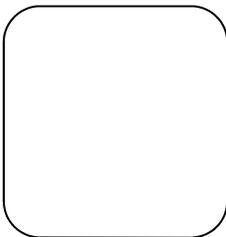

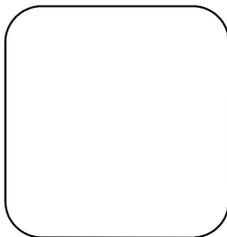

des œufs

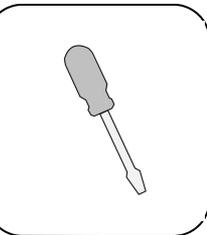

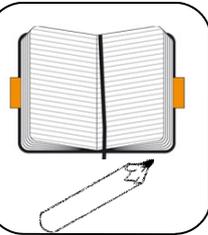

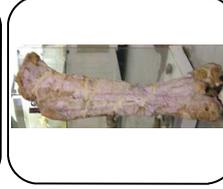

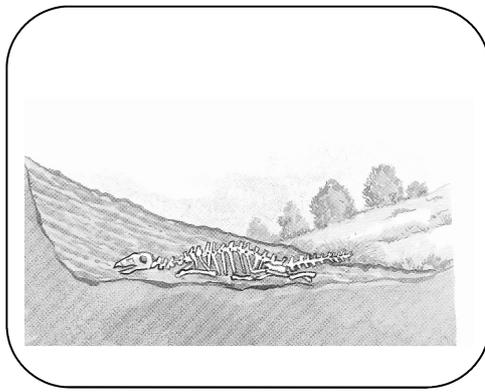

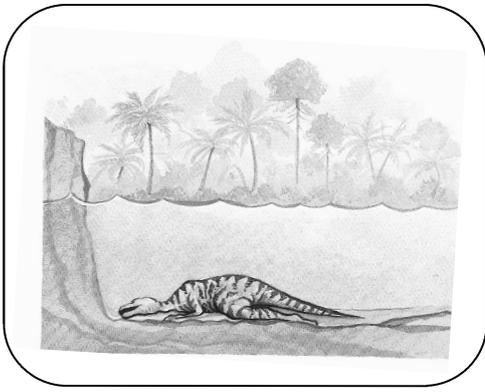

des griffes

des os

des empreintes

Pour travailler le paléontologue utilise des outils:

Attention, il y a des intrus !!!
