

DOMINO DES FRACTIONS

Nombre de joueurs : 2 à 3

But du jeu :

Placer tous ses dominos.

Matériel :

⇒ Dominos

Déroulement du jeu :

Les joueurs disposent les dominos sur la table, face cachée. Ils prennent chacun 4 dominos.

Les dominos qui resteront serviront de pioche.

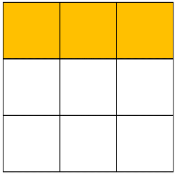

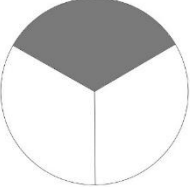

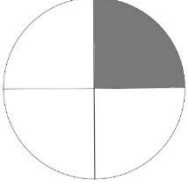

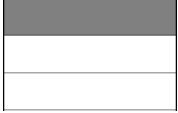

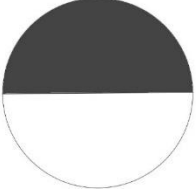

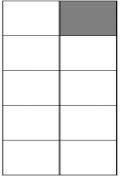

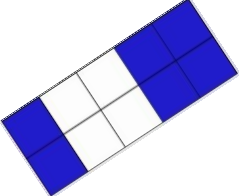

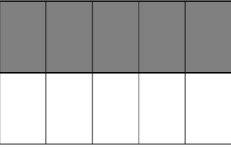

Le premier joueur pose un domino de la pioche sur la table. Si le joueur possède un domino dont la fraction ou l'image correspond à une des deux parties du domino posé, il peut placer en faisant correspondre les images ou les fractions.

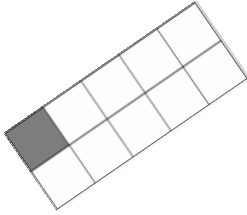

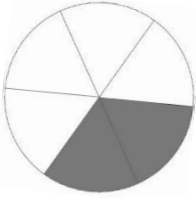

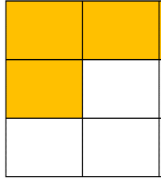

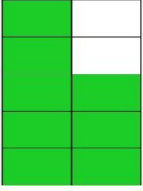

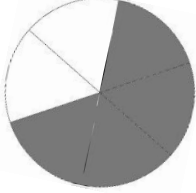

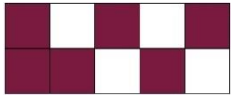

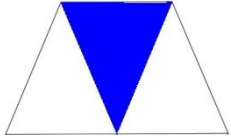

S'il ne possède aucune image ou fraction identique, il pioche un domino. Si ce dernier correspond à celui sur la table, il le place. Sinon, il le garde.

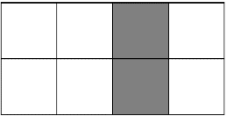

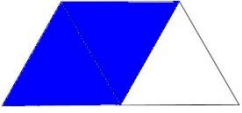

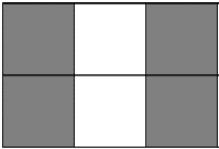

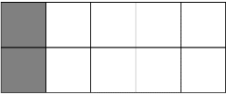

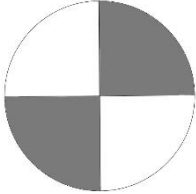

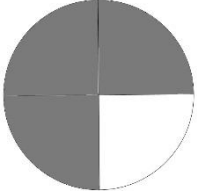

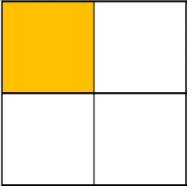

C'est alors au tour du joueur suivant. Le jeu se déroule dans le sens des aiguilles d'une montre.

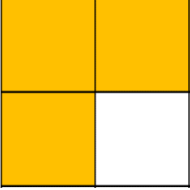

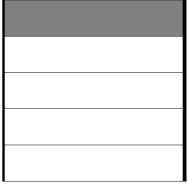

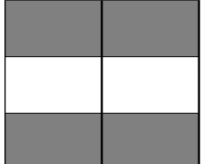

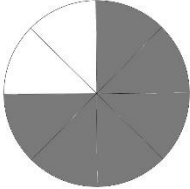

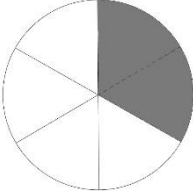

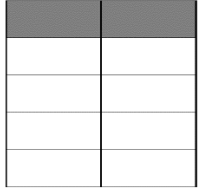

Le premier joueur qui réussit à placer tous ses dominos gagne la partie.

Si personne ne peut plus jouer de dominos, celui à qui il en reste le moins gagne.
