

Faut-il décomposer cent jetons ?

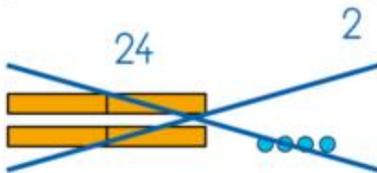

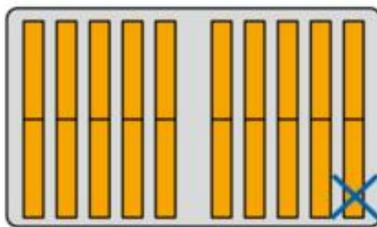

$124 - 19$

Pas besoin de décomposer cent jetons.

$124 - 19 = \dots\dots\dots$

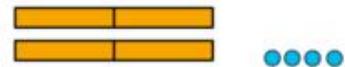

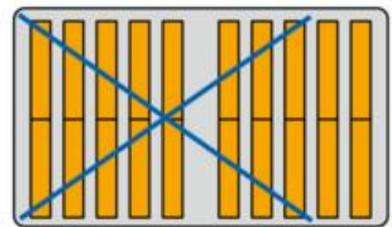

$124 - 26$

124 moins 24, c'est 100. Il faut encore retirer 2, il reste...

$124 - 26 = \dots\dots\dots$

$124 - 80$

Il faut décomposer cent jetons, mais c'est facile !

$124 - 80 = \dots\dots\dots$

Calcule (si tu as besoin, dessine comme Picbille au brouillon).

$145 - 23 = \dots\dots\dots$

$115 - 18 = \dots\dots\dots$

$135 - 90 = \dots\dots\dots$

$162 - 49 = \dots\dots\dots$

$130 - 45 = \dots\dots\dots$

$108 - 50 = \dots\dots\dots$

$120 - 18 = \dots\dots\dots$

$105 - 9 = \dots\dots\dots$

$127 - 80 = \dots\dots\dots$
