Activateur d'eau EMO de Nayadel

<http://vimeo.com/9460876>

Histoire de la re-création de l'activateur d'eau Emo de Nayadel. Explication de son fonctionnement et de son interaction avec l'eau. Inclut des images des cristaux d'eau, prises avant et après le passage de l'eau par

l'activateur Emo de Nayadel, ainsi que des résultats obtenus avec une caméra GDV.

If you like to know more about the Nayadel group you can watch, in Vimeo, the documentary A Parallel Reality vimeo.com/8689293

Músicas video EMO: Johann Sebastian Bach Sinfonia nº11-G minor. BWV 797. Interpretada por Felipe Sarro. Wenn Wir in höchsten Nöten sein. BWV 641. Pastoral Sinfonia. Christmas Oratorio. José Padilla Navigator (part 1).

Water life crystals

<http://vimeo.com/1972498>

Photos of water crystals after the water pass through Emo de nayadel. Photos taken by Hado Insitute of Dr. Masaru Emoto

Gotas de agua despues de pasar por Emo de Nayadel. Video realizado por la filial europea del Instituto Hado del Dr. Masaru Emoto

A Parallel Reality

<http://vimeo.com/8689293>

At some point, we all ask ourselves who we are, where we come from and where we're going. But many of us stop wondering about the meaning of life because solving the day-to-day dilemmas of everyday existence is challenge enough in it self.

This is the story of 5 people who kept wondering over the course of their lives because they needed to find the answers. Five adventurers. Five explorers who have opened the door to a reality that goes beyond the boundary we assume exist.

What we would like is that after watching this documentary, you felt the need to search, to look within yourselves. We'd like you to say: yes, there is something more! Reality goes beyond the limits of what I can see with my eyes or touch with my hands! I can go beyond! And going beyond means connecting with our true strength. With the divine spark in all of us. Enjoy your journey!

This documentary came into being thanks to Dolors Martorell, Daniel Hernández and Pablo Uson. We are enormously grateful, for your great generosity in allowing this documentary and the extras with it, to be viewed and downloaded free of charge.

1. WATER

In the ancient civilisations there was a water consciousness, an awareness of water as the Substantial Mother of Life.

It was recognised as a carrier of cosmic consciousness, of the creative energy, source of healing and regeneration.

In our culture our water consciousness is dormant. Water has been relegated to being an servant to man for merely mechanical uses: washing and cleaning, transport, raw material in industrial processes, and so on.

In the scientific world, however, there is a renewed and growing interest in research into the properties of water and its function within the organism. Recent discoveries reveal the mechanism by which water flows into the cell, through channels in the cellular membrane and the implications this process has for energy levels in the cell.

http://nobelprize.org/nobel_prizes/chemistry/laureates/2003/public.html

Science investigates, models theory...but it is our personal responsibility to recover our water consciousness, to go beyond our mechanical relationship and recognise water for what it is: a carrier of information, a sustainer of the physical body, forming the body of love of humanity and the planet.

To relate to it from out of respect and love, conscious of the role it plays in our lives and around the planet.

WATER HAS A MEMORY

In water's power to store information resides its ability to sustain the emotional body of Human Beings.

Water has the ability to absorb and transport information.

We can extract the substances that accompany water by means of any of the current water filtering systems, systems for removing lime, dechlorinating, osmosis... but the information that the water has taken on will remain, and is the "memory of water".

This ability is clearly shown by Dr Emoto's experiments. In these he photographed frozen water crystals that had been submitted to a variety of different information. His pictures show that water is not indifferent to what surrounds it. It reorders itself internally in a natural, beautiful and elegant way as it recognises natural patterns.

What is more, all patterns that ever reached the water, such as cosmic radiation, telluric energies, man-made radiation, intentions and words, enter into the internal configuration of the structure of water.

Memories of the emotions and experiences of Human Beings travel along the energy channels and are transferred to the cellular DNA where they become fixed. In the process of transference and storage of this information, the water in the body plays a crucial role.

Water has an ethereal body which has channels through which circulate the energies of Divine Love and the Life Force radiating from the Source as codes of Light and Sound.

The false perceptions that we have created, based on fear, get fixed in these channels and create energetic blocks in the Body of Love and in the Body of Light which impedes transference of the energies of Love and the Life Force.

Human Beings are immersed in the energy matrix of consciousness where **NOTHING IS SEPARATE, ALL IS INTERCONNECTED.**

There are different nested levels of consciousness, like a set of Russian Dolls. But with the difference that they are not separated one from another, but are interconnected, forming a whole.

Every level is of equal importance in the functioning of this **WHOLE**.

In this way, since everything is interconnected, the water of the Planet, which carries its emotional body, has taken on the emotional memory of the entire history of humanity.

Healing the Love body and eliminating the blockages is therefore essential for the physical, emotional, mental and spiritual well-being of Human Beings.

As all is interconnected, the healing of each Human Being affects the whole of Humanity and the Waters of the Planet.

The change to a higher level of consciousness both for individuals and for Humanity, depends on an understanding and healing of the energy blocks in its Love Body at individual and collective levels.

Human beings have, in the course of their evolution, to heal the blocks brought about by discord and distortion.

Emo: a place of regeneration which contributes to the process of healing which human beings and the Planet aspire to.

Emo and Consciousness

The type and depth of the effects produced will depend on the level of Consciousness and the Conscious Intention with which the person interacts with the water treated by the Emo.

Our interaction with Emo water and its effects will also evolve. This will happen as there is a similar evolution in the realisation of our potential for resonance which our ESSENCE already has available to it.

2. What is IMPLOSION?

The whole universe **palpitates** unceasingly. The known universe alternately contracts and expands at different rhythms and frequencies. This rhythm is known as **life**.

Human beings need both thought and action, nature alternates cold and heat, dry with wet, dark with light. This **cosmic dialectic** has been perfectly understood and explained by the eastern cultures, with the **ying-yang** model of opposing and complementary forces.

However, the technology of the 20th century has ignored this principle and has insisted on obtaining the energy of expansion, of **centrifugal force**, of **EXPLOSION**.

The inefficiency of this system resides in the high price that has to be paid to friction, which dissipates the greater part of the energy obtained in the form of heat.

The higher the speed, the greater the resistance, the greater the heat, the more the pressure, the greater the loss of efficiency.

At the same time, explosion goes hand in hand with combustion and, therefore, with oxygen consumption. A car travelling at 50 km/ hour consumes 750 times more oxygen than a human being. The consequences for the environment are as disastrous as they are well-known.

If we observe nature we will find that the maintenance of life is based on recovering energy from the outside and concentrating it on the inside, using **centripetal force**, in **IMPLOSION**.

Implosions seek the line of least resistance, by means of the centripetal spiral, the vortex. It transforms the radial force into force curving inwards toward the centre, reducing the resistance and increasing the speed of rotation. This behaviour explains the self-cleansing of water: the particles in suspension that are denser than water are drawn toward the centre of the vortex and pushed toward the bed of the current, freeing the water of waste, freshening it, and accelerating flow.

The greater the speed, the less the resistance, the colder, more condensed, and more efficient.

Copy Nature

Viktor Schauburger (1885-1958) a forest ranger in the Austrian woods in his youth, he was a pioneer and a visionary who, through observation of nature, deduced the rules of behaviour of the rivers, woods...His work is based on the evidence that nature uses centrifugal force to separate or deconstruct while using centripetal force to energise and construct. For him “our technicians treat matter in the wrong way. Their technologies interfere with nature”. “Understand and copy Nature” was his maxim.

Nature moves in a spiral, shuns straight lines. Energy which moves in a straight line disperses, while energy with feedback according to the golden measure finds the way of non-destructive compression... The geometry of the vortex corresponds to hyperbolic cone generated by the revolution of a curve defined as $y = k \cdot 1/x$.

The biology of implosion

The walls of the heart and the arteries are made of fibres that form spirals, and hence blood flows in the same way.

Air, water, sap, blood...travel in spirals and vortices.

The vortex acts to reduce the size of molecule clusters and facilitates penetration/ hydration of the cells.

The beautiful drawings of **Theodar Schwenk** in his book “Sensitive Chaos” reproduce the basic forms of nature. Spirals, vortices, nested curves...these are constants which energy needs to sustain itself.

Matter is just the visible part (that which vibrates in the electromagnetic spectrum, between 400 and 800 nm.) of a complex system which follows a pressure wave pattern, which stores inertia and becomes matter.

The heart's shape is the best possible design for maintaining the blood in movement at the least added cost.

The old amphorae, with their apparently awkward design, making it impossible to stand them upright, involved the same forms as the heart. The constant movement of the amphorae of antiquity during voyages or travel on horseback, kept the liquid (wine, oil...) moving dynamically, precluding the deterioration of the contents.

Rudolf Steiner, too, experimented with the vortex. He noted that by inducing a rightward or clockwise movement, vibratory rates increased. This water has a beneficial effect on plants, animals and people, since the hyperbolic acceleration and the creation of “sensitive layers” activate phenomena of a subtle nature. At the same time there is physical-chemical proof of this, since the water exhibits triple-valency (a change in grouping or clusters) and bioelectrical state, conductivity and redox potential are all modified.

Connecting dimensions

The creative force is non-destructive compression. The original movement (the TAO made manifest) creates polarity, and the interaction between opposite poles we call energy. Energy moving in a straight line loses polarity and eventually disperses. **Energy in feedback motion, nested within itself according to proportions of the golden mean, is self-sustaining and in the final analysis creates CHARGE, GRAVITY and MATTER.**

The physical vortex observed in Nature is the result of the interaction of cosmic energy with the Earth's energy. It is the communication between ethereal energies from different dimensions. It is not that things move in spirals, creating vortices – the vortex actually creates reality! In Schauberger's words: “trees don't grow, they are stretched, birds don't fly, they flow, the trout in the river don't swim, they are “swum”.

What we see as material objects and movement are simply expression and reaction in the presence of the ethereal dynamic.

Water is ethereal energy condensed, and if it ceases its original movement, it loses vitality and becomes stagnant. It needs to recover the primordial movement, to recharge itself with the energies of heaven and Earth.

3. The memory of WATER, Does it exist? Where?

WATER REMEMBERS, WATER TRANSMITS. We call water the combination of hydrogen and oxygen, in H₂O molecules, found as a liquid under normal conditions on Earth. These molecules have a charge distributed in tetrahedron form, where covalent bonds acquire positive polarity and “hydrogen bridges” acquire negative polarity. This distribution renders the molecule dipolar (like minuscule magnets) which makes possible such essential things as the dissolving of salts and transportation of different materials in suspension, including organic materials. At the same time, the interaction of the molecules among themselves (recall that they are tetrahedron in form) results in the formation of clusters or networks. In similar fashion to the neuron networks in human beings, these reticulations contain materials (anions and cations), acquire specific connections between their molecules, and share energy (polarity). All the “experiences” undergone by the water: places through which it has passed, gathering to itself salts, minerals, pesticides, rainwater , etc. enter into it physically, enabling a specific molecular distribution to store this material. Furthermore, all the frequencies that

have reached the water, such as cosmic radiation, telluric energies, man-made radiation, intentions or words will also enter into the configuration of the water's structure. The information consists of frequencies of diverse origin, and water has the property of absorbing and transmitting these frequencies. The material in suspension can be removed by modern methods of filtering, lime removal, dechlorination, osmosis...**but the structure that has stored these “experiences” remains in place and constitutes “the memory of water”.** The frequencies are not stored in the molecular network, the network acquires a form and a polarity that reproduces these frequencies. The water that we take in carries nutrients and penetrates our cells, enabling exchange and constantly rebuilding of our organism. But we can affirm that it also transmits information to our body, brings order or disorder, polarity or chaos, and conserves or increases entropy.

HOMEOPATHY: MEMORY THAT HEALS. Samuel Hahnemann (1755-1843) became a doctor of medicine in 1781, and was director of Public Health in Dresden. A recognised polyglot and scholar of chemistry, he wrote and translated various treatises on medicine while continuing his clinical work and attending to his patients. In 1787, disillusioned, he abandoned his practice of conventional medicine and devoted himself to research. His son Frederic continued with his work and it was he who gave the first impetus to homoeopathy. The Principle of Similarity of homoeopathy states that “like cures like” and postulates that the substance that causes the symptoms of the complaint in a healthy person can treat the same symptoms in a patient. The substances used in homoeopathy are diluted many times (10, 20, 30 times at 10%) in order for its use to be safe, but homoeopaths believe that sufficient “likeness” between the remedy and the complaint will stimulate the ability of the organism to cure itself. This method, together with the definition of Avogadro's Number (6.023×10^{23}), implies that in the preparations with D 30 solutions, these are diluted to the point where it is impossible to find any of the original molecules. And yet, the more diluted the solution the greater the power to cure. Homoeopathic dissolving and dynamising is the method used to transfer the energy from the material to the water. Water reproduces the form, the vibration, of the substances with which it comes into contact. **Homoeopathy**, or the many ancient therapies that use flower essences, act on the principle that water acquires the properties of the original substance to be dissolved, takes on their internal form and as such is recognised by our organism when it is ingested. When a homoeopathic preparation (for example, nux vomica, which is a poison if taken directly) transfers the qualities of this substance to the water and it then goes into our body, and the body reacts (as with a vaccine) exactly as if the original substance were still present.

NEW APPROACHES TO THE NATURE OF WATER The different treatments that water can be given together with the versatile physical-chemical properties, produce measurable changes in its structure and its abilities. Water transports elements to others, communicates between organisms, aids metabolism, stores biology in all its expressions. It replicates and stores the electro-magnetic frequencies with which it comes into contact, aligns its structure and vibration to activate communication. It is the universal CARRIER of INFORMATION. It tenses, polarises, redefines its internal organisation based on its interaction with the environment that it shares. Its internal alignment can be detected in the ice crystals that it forms when the stimuli it receives tune it into its original nature (M.Emoto). Its emission and absorption of frequencies can be measured (E.Ciccolo) in resonance with its surroundings. Its structure is more determining in homoeopathic terms than the matter that it stores (J. Benveniste). It reproduces in its internal structure and its vibration that which it has experienced. Water has a MEMORY. **Jacques Benveniste** († October 2004) research director at the Paris Inserm public organisation in 1988, carried out an exhaustive investigation into the principles and effects of homoeopathy. His central thesis is that communication between cells is not effected by physical contact and the exchange of

biological material but through the emission and reception of electromagnetic frequencies. Benveniste began to experiment with the white cells in human blood known as basophiles and involved in allergic reactions. These cells have little granules that contain substances such as histamine, partly responsible for allergic reactions. The granules can be marked with a special marker and then have the marker removed (degranulation) by means of a substance known as anti-immunoglobulin E or aIgE . Up to this point all has been pure science. What makes Benveniste's article highly controversial is that he states that degranulation continued to occur even after reaching dilute levels of aIgE at which not a single molecule of the substance could still be present. But this only happened when, at each stage, the solution was vigorously shaken, the procedure in homoeopathic medicine. The implications of this demonstration put the million dollar interests of the pharmaceutical industry at risk. The campaign mounted against Benveniste and his team put an end to his research grants, and his scientific reputation, although subsequent experiments and other researchers such as the Swiss Louis Rey, have basically corroborated his conclusions: water reproduces the qualities of the substance that were dissolved in it (if there is vigorous shaking) and it transmits these by means of electromagnetic frequencies. **Masuru Emoto** has provided evidence of the response of water to stimulus from the environment. In a direct and highly visual way, his photographs of ice crystals taken of different waters, of different origins and submitted to different impressions, show the beauty that water takes on in the presence of music, good intentions, or prayer. Given these images, no one can doubt that water is responsive to its surroundings. It orders itself internally in a natural, beautiful and elegant way in response to natural patterns, responding to its own morphic resonance. Like everything in nature, its fractal behaviour reflects its molecular structure in its crystals, its hexagonal stars confirm the tetrahedron clustering of its dipolar molecules. In seeing how an ice crystal arranges itself in a beautiful way under the influence of the music of Beethoven or how it reorganises its structure after a prayer or good words – who can doubt that water listens, imitates, conserves and transfers information. That is, it MEMORISES.
