Le printemps des nombres

- ✓ Décomposer les nombres de manières différentes : additions, soustractions, dizaines et unités, monnaie, etc...

Règle du jeu :

Le joueur choisit une fleur au hasard. Il produit alors une décomposition par pétale. La PE pourra mettre à disposition une fleur géante pour que les élèves composent directement dessus avec des outils de manipulation. L'élève peut ensuite recopier sa décomposition dans une fleur vierge ou prendre en photo pour faire valider.

Pour l'impression du jeu :

Imprimer les fleurs normalement. Mettre à disposition une fleur géante, des barres centaines, dizaines, unités, de la monnaie, des feutres d'ardoise, des cartes $10 + 10$ etc....

A quel moment faire ce jeu ?

Lors de l'étude des décompositions des nombres. Cela pourra donc se faire du CP au CM2.
