

(04)

**La division est une situation de partage équitable où le reste est toujours inférieur au diviseur.**

- Complète suivant l'exemple :

|               |                                                                 |                                            |
|---------------|-----------------------------------------------------------------|--------------------------------------------|
|               | $86 = 50 + 36$                                                  |                                            |
| $86 : 5 = ?$  | $86 = (\underline{5} \times 10) + (\underline{5} \times 7) + 1$ | $86 : \underline{5} = 17 \text{ reste } 1$ |
|               | $86 = \underline{5} \times (10 + 7) + 1$                        |                                            |
|               | $86 = (\underline{5} \times 17) + 1$                            |                                            |
|               | $74 = 40 + 34$                                                  |                                            |
| $74 : 4 = ?$  | $74 = (4 \times \dots) + (4 \times \dots) + \dots$              | $74 : 4 = \dots \text{ reste } \dots$      |
|               | $74 = 4 \times (10 + 8) + \dots$                                |                                            |
|               | $74 = (4 \times \dots) + 2$                                     |                                            |
|               | $93 = 90 + 3$                                                   |                                            |
| $93 : 3 = ?$  | $93 = (3 \times \dots) + (3 \times \dots) + \dots$              | $93 : 3 = \dots \text{ reste } \dots$      |
|               | $93 = 3 \times (\dots + \dots) + \dots$                         |                                            |
|               | $93 = (3 \times \dots) + \dots$                                 |                                            |
|               | $128 = 70 + 58$                                                 |                                            |
| $128 : 7 = ?$ | $128 = (7 \times \dots) + (7 \times \dots) + \dots$             | $128 : 7 = \dots \text{ reste } \dots$     |
|               | $128 = 7 \times (\dots + \dots) + \dots$                        |                                            |
|               | $128 = (7 \times \dots) + \dots$                                |                                            |

- Calcule le quotient et le reste suivant l'exemple :

|               |                                                                                              |                                             |
|---------------|----------------------------------------------------------------------------------------------|---------------------------------------------|
|               | $247 = 200 + 47$                                                                             |                                             |
| $247 : 4 = ?$ | $247 = (\underline{4} \times 50) + (\underline{4} \times 10) + (\underline{4} \times 1) + 3$ | $247 : \underline{4} = 61 \text{ reste } 3$ |
|               | $247 = [\underline{4} \times (50 + 10 + 1)] + 3$                                             |                                             |
|               | $247 = (\underline{4} \times 61) + 3$                                                        |                                             |
|               | $860 = 800 + 60$                                                                             |                                             |
| $860 : 8 = ?$ | $860 = (8 \times \dots) + (8 \times \dots) + \dots$                                          | $860 : 8 = \dots \text{ reste } \dots$      |
